

tutorial installazione wordpress su mac con mamp

1 installazione mamp

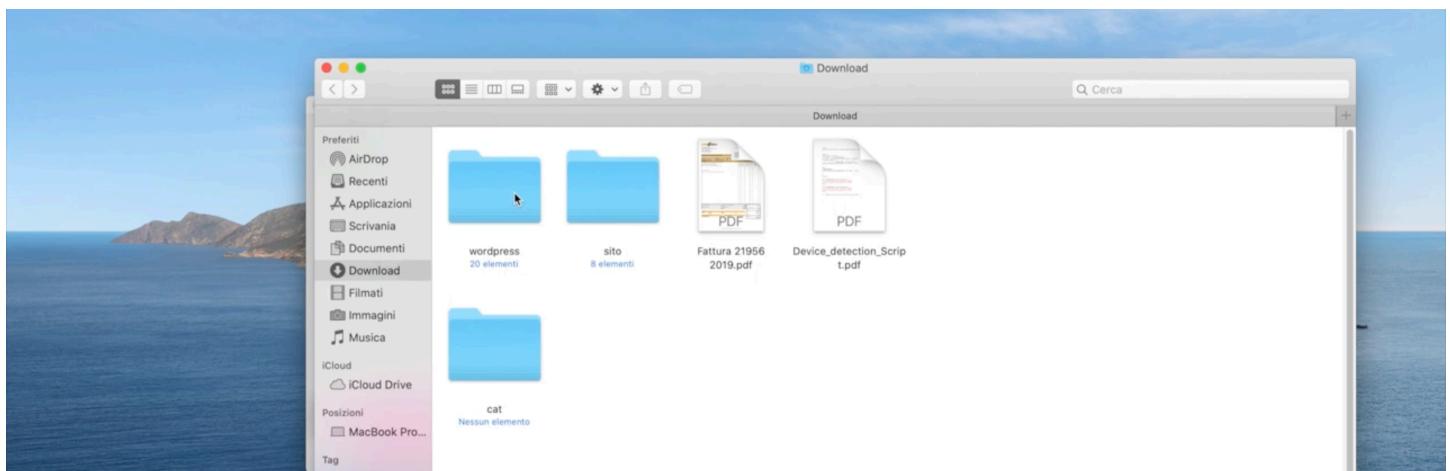

2 andare su sito mamp e in tools cliccare phomyadmin

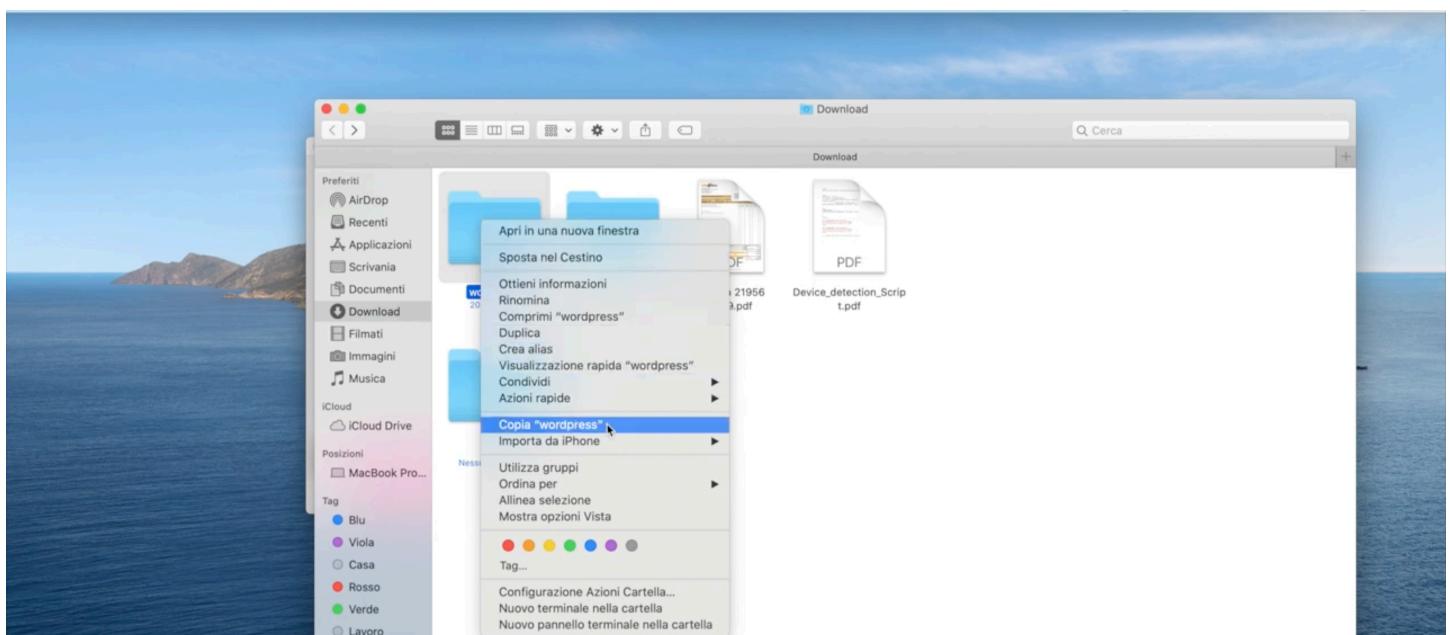

3 creato database

The screenshot shows the phpMyAdmin interface on a Mac OS X desktop. The title bar indicates the server is localhost:8888. The main window is titled 'Database' and shows a list of existing databases: information_schema, mysql, performance_schema, and sys. A search bar at the top has 'tutorial' typed into it. Below the search bar is a table with columns 'Database', 'Codifica caratteri', and 'Azione'. The 'Tutorial' database is listed with 'utf8_general_ci' encoding and a 'Controlla i privilegi' action link. A message at the bottom says 'N.B.: Abilitare qui le statistiche del Database potrebbe causare del traffico intenso fra il server web e MySQL.' with a note icon.

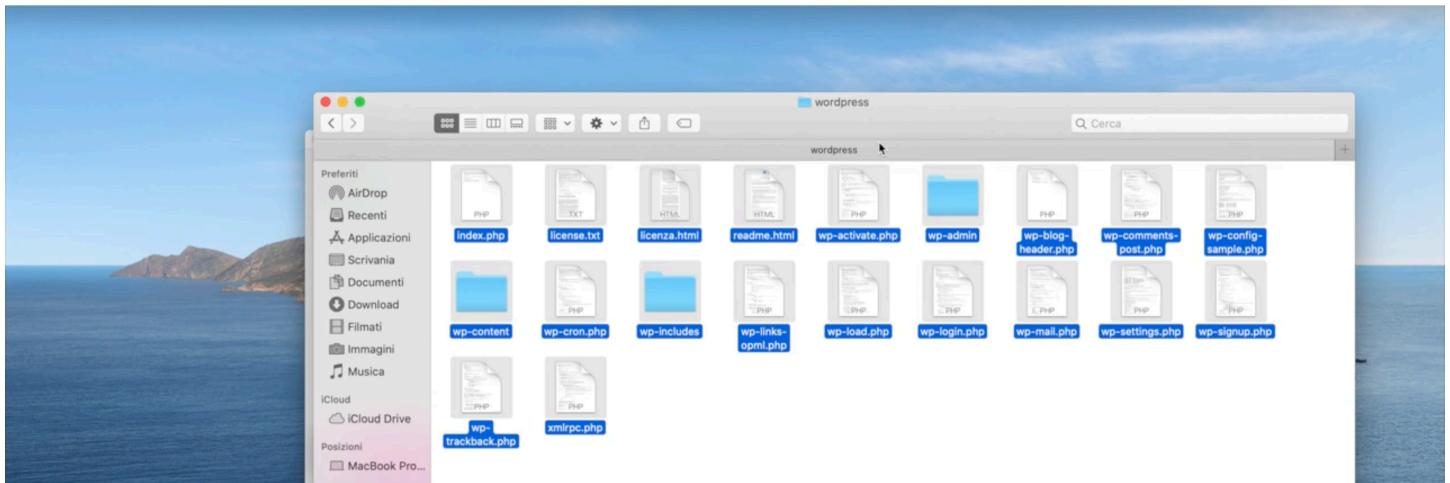

4 andare in cartella mamp e clicca su worpress

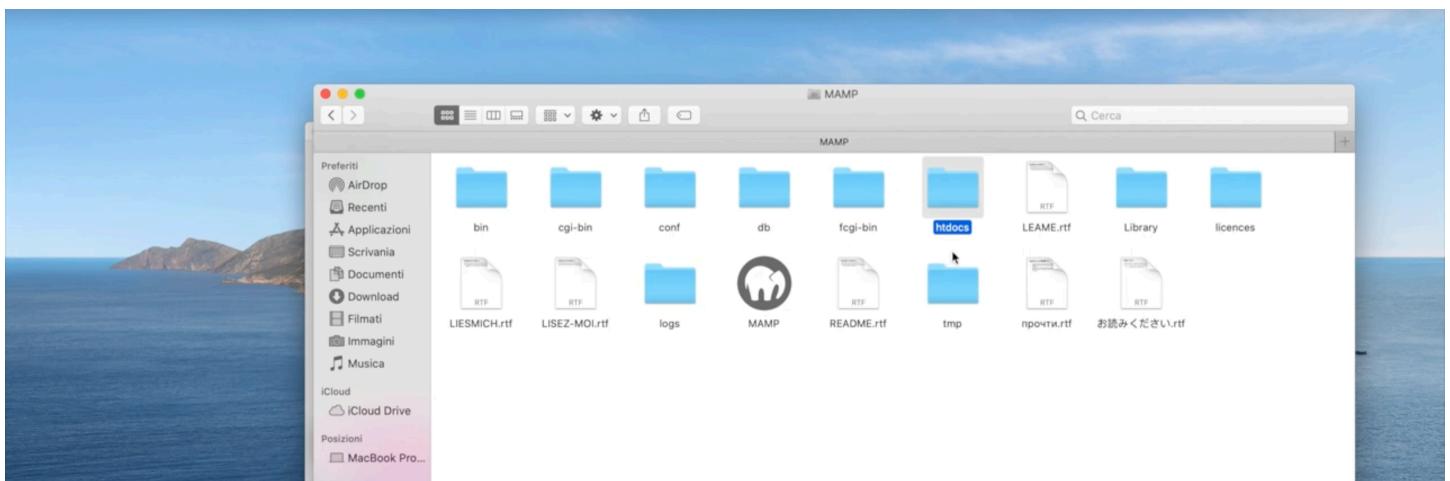

5 copia

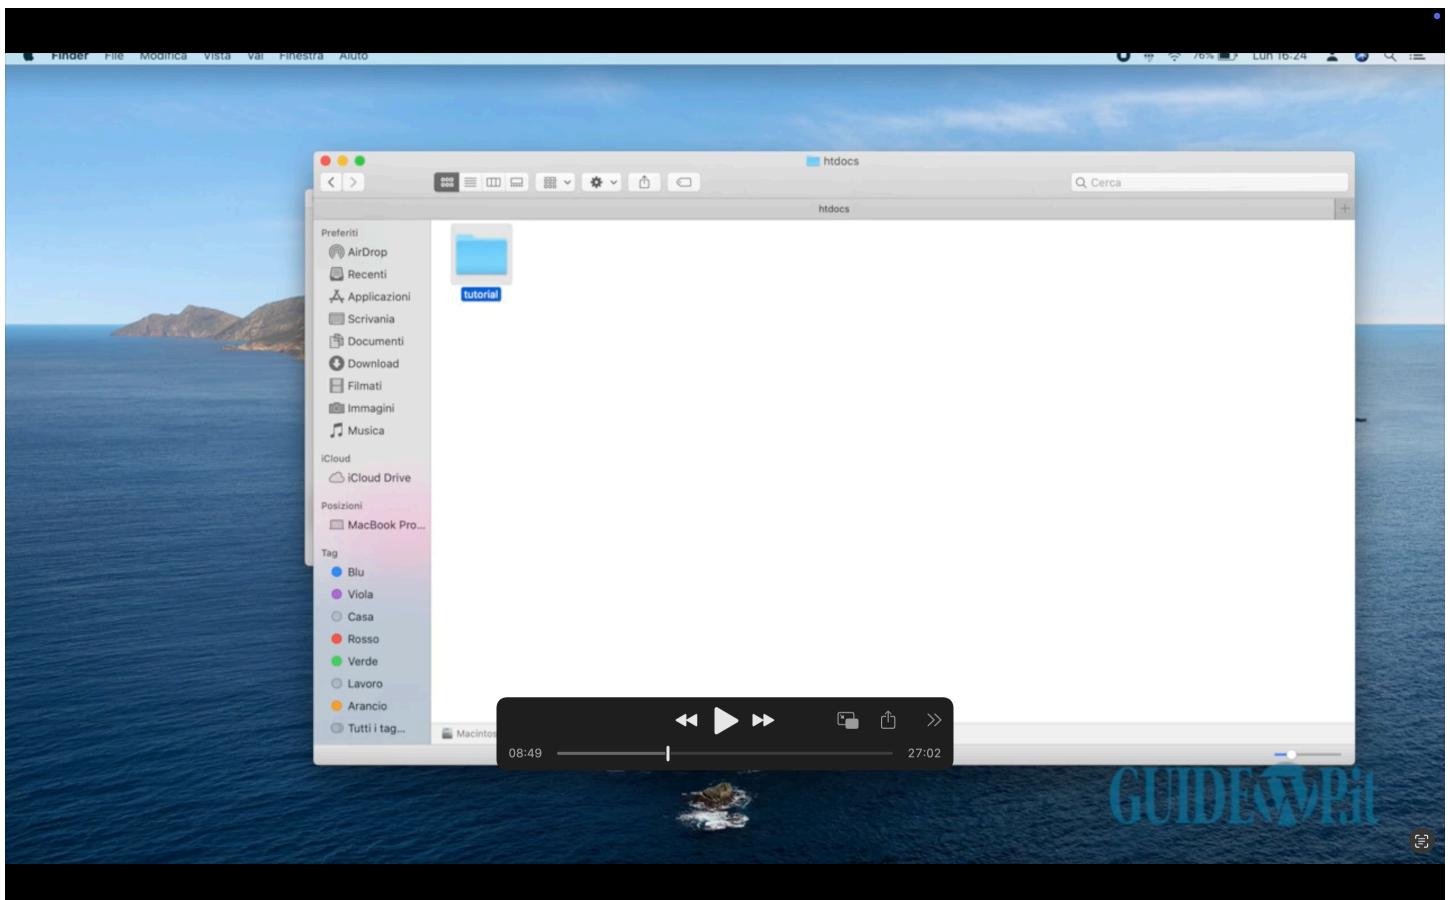

6

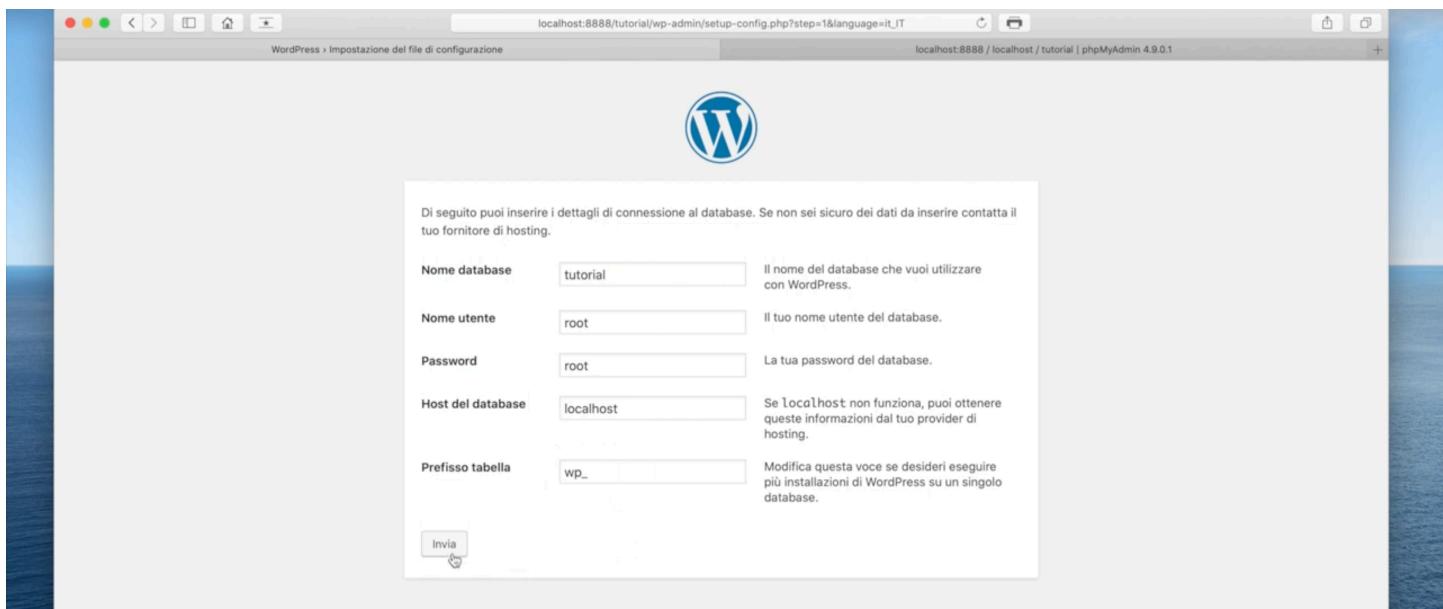

7 in htdocs

8 rinominare con nome sito

9 effettuare accesso da localhost

10 dovrebbe apparire il sito in admin wordpress
